CLEFT PALATE SIMULATOR

AN ANATOMICALLY ACCURATE CLEFT PALATE SIMULATOR THAT IS INVALUABLE AS A SURGICAL TRAINING TOOL

Simulare's Cleft Palate Simulator has been developed and validated at the world-renowned Hospital for Sick Children in Toronto, Canada. Anatomically accurate and invaluable as a training tool, Simulare Cleft Simulators are designed to accelerate the learning curve, reduce patient risk, decrease training costs and elevate the surgeon's level of competence and confidence.

The Cleft Palate Simulator is available as a stand-alone unit or configured as a comprehensive kit that includes the simulator base with five cartridges; a full set of surgical instruments including a Dingman retractor, sutures and blades; a training video and learning materials; and even an endoscope camera with a Dingman attachment to allow intra-oral video recording.

THE CLEFT PALATE SIMULATOR KEY ADVANTAGES:

- Complete surface anatomy
- Complete muscular anatomy
- Life-size and anatomically accurate
- Proficiency gained safely without patient compromise
- Trainees perform critical start to finish steps using real surgical instruments
- Allows trainee and teacher to examine details at each step
- Enables technical proficiency during dissection within a confined oral cavity
- Dissection and repair provide real-time feedback
